**Allowable Subject Matter**

The following is an Examiner's statement of reasons for the indication of allowable subject matter:

Applicant(s) claimed invention is directed to a polycarbonate copolymer, a heat resistant part, a part for reflow soldering light path converting part, an optical disk, a plastic mirror, a tray and a conductive resin composition comprising the copolymer having recurring units derived from a dihydroxy moieties of a 9,9 bis(4-hydroxy-3-methyl phenyl)fluorene unit and a bis hydroxyphenylpropane unit. The crux of the invention lies in the discovery that the particular dihydroxy moieties having the specific ratios produce a copolymer and/or composition, which have superior properties of heat resistance. dimensional stability that may be used to produce molded articles having superior characteristics. Such has neither been anticipated by nor made obvious from the prior art. The art of record discloses the use of the above dihydroxy moieties of a 9,9 bis(4-hydroxy-3- methyl phenyl)fluorene unit and a bis hydroxyphenylpropane moieties however does disclose the use of them as the sole structural moieties or having the specific proportions or ratios as claimed. Further, art of record, which is of interest with regard to their use in as much as they contain both moieties as well as the use of a polycarbonate as the articles as claim disclose in addition to the claimed moieties, the further use of additional components such as pentacyclopentadecanedimethanol as in USP 6316576 as well as a bisphenol compound having a polysiloxane structures as in USP 6340737 neither of which are eligible as prior art. The art previously of record, i.e. USP 5409975 does not employ a 9,9 bis(4-hydroxy-3- *methyl* phenyl)fluorene but the use of a 9,9 bis(4-

hydroxyphenyl)fluorene moiety and does not disclose the use of such compounds as claimed. There exist no obvious combination of the references above.
